

FOR RELEASE AT 9:00 A.M. EDT ON APRIL 15, 2008

## **MENTISoftware, GRC Software Solutions Leader, Extends Support to EnterpriseDB**

**DENVER, COLLABORATE 08, Apr. 15, 2008** — MENTISoftware (MENTIS), a Governance, Risk and Compliance (GRC) thought leader and software solutions provider for Oracle databases and applications, and EnterpriseDB, the leading enterprise open source database company, today announced that MENTIS will be extending support to EnterpriseDB's Postgres Plus database product family.

MENTIS is excited to partner with EnterpriseDB and supply automated strategic controls, compliance management, and airtight data security to EnterpriseDB's customers.

“EnterpriseDB is an attractive option for companies seeking a cost-efficient way of using large-scale databases,” said Rajesh Parthasarathy, President and CEO, MENTIS. “As these companies amass more and more data, their security and compliance needs will grow dramatically. We want to support EnterpriseDB's strategy to be ahead of the curve and to help their customers protect a fundamental area of GRC — sensitive corporate data. With MENTIS products, EnterpriseDB's customers will be able to comply easily and flexibly with changing legislation and to protect themselves from internal and external security threats. We recognize EnterpriseDB's growing position in the marketplace and will provide the same highly effective, integrated products for EnterpriseDB users as we do for Oracle users.”

The first MENTIS product offered for EnterpriseDB will be iScramble 6.2. iScramble has the option of more than 19 different masking methods (including masking for PCI compliance) to protect non-production databases as they are regularly cloned from production and exposed to employees, consultants, and third parties. Data structures are

left intact, so development, testing and global data sharing can be accomplished safely and easily. Because of the MENTIS design, there is no encryption or overhead, and products fit seamlessly into existing processes.

“We are pleased that MENTIS, a recognized leader in the GRC arena, will be offering their sophisticated risk reduction and data governance solutions for EnterpriseDB’s Postgres Plus database products,” said Andy Astor, CEO, EnterpriseDB. “Postgres Plus databases, which are renowned for their stability, reliability, and mature enterprise-class features, are frequently chosen for exactly the kinds of mission-critical applications that will benefit most from the availability of the MENTIS GRC solutions.”

### **About MENTIS**

MENTIS’ comprehensive preventive and detective strategy automates compliance and security across the security architecture. The MENTIS technical engine is innovative and flexible with products that cover production and non-production databases, applications, and custom security architectures. [Masking](#), [monitoring](#), and [access control](#) products work independently or can be used as a complete [GRC solution](#). Out-of-the-box metadata, data classification and security rules allow companies to comply with changing, complex legislation within their industry, automate complex processes, and facilitate collaboration between compliance and technology groups. MENTIS installs easily, rolls out painlessly, has zero performance impact, and provides quick ROI.

Using the same technical engine that powers its products, MENTIS also provides an independent state of security review, which is a quick, yet comprehensive risk and exposure assessment of an organization's database security setup. It includes a gap analysis of current state vs. industry-specific best practices and compliance requirements, and tactical and strategic recommendations to achieve and sustain best practices.

MENTIS was founded in 2004 by experts in information security, IT audit, compliance, and enterprise software development. For more information, please contact 1-212-861-2235.

### **About EnterpriseDB**

EnterpriseDB is the world’s leading provider of enterprise-class products and services based on PostgreSQL, the world’s most advanced [open source database](#). The company’s Postgres Plus products are lightning-fast, massively scalable, and extremely reliable, making them ideal for high-volume, mission-critical applications. EnterpriseDB has offices throughout North America, Europe, and Asia. The company was founded in March 2004 and is headquartered in Edison, N.J.
