

FOR IMMEDIATE RELEASE

**MENTISoftware, GRC software solutions leader,
announces the Enhanced Product Offering of GRC 6.0**

Denver, Collaborate '08, April 14, 2008— MENTISoftware (MENTIS), a Governance, Risk and Compliance (GRC) thought leader and software solutions provider for Oracle databases and applications, **today announced the release of GRC 6.0, with enhanced intelligence.**

For the past four years, MENTIS has offered a highly effective, integrated approach to compliance and data security. With the release of GRC Suite 6.0, another level of sophistication has been added to this product suite. A new interface enhances the user experience with a wizard-based approach and with streamlined interconnections between each module within the suite. Multiple templates can be quickly customized and applied to the usage of different database types (UAT, DEV, etc.), and to individual business purposes such as industry-specific laws. Additionally, the data classification engine automatically translates the technical table and column names into simple business terms. This allows the technical and business teams -- Compliance, Risk, and Governance -- and IT to close serious security gaps and address critical interdependencies.

"What differentiates this product suite from other rules-based approaches is that we not only provide preventive and detective controls, we provide a framework and intelligence", said Rajesh Parthasarathy, President and CEO of MENTIS. "Customers can quickly identify risk areas, analyze exposure, and then determine the action steps that will provide the most benefit. The architecture itself guides the user into making informed and successful decisions. Our customers quickly make giant steps forward in the complex arena of GRC and have the ability to show concrete results to auditors."

Since the product suite is modular, customers can solve one problem at a time, expanding according to their needs, or adopt a complete solution. In addition, each product implements within 2-3 days for a rapid return on investment.

About MENTISoftware

MENTIS' comprehensive preventive and detective strategy automates compliance and security across the security architecture. The MENTIS technical engine is innovative and flexible with products that cover production and non-production databases, applications, and custom applications. [Masking](#), [monitoring](#), and [access control](#) products work independently or can be used as a complete [GRC solution](#). Out-of-the-box metadata, data classification, and security rules allow companies to comply with changing, complex legislation within their industry, automate complex processes, and facilitate collaboration between compliance and technology groups. Using the same technical engine that powers its products, MENTIS also provides an independent state of security review, which is a quick, yet comprehensive, risk and exposure assessment of an organization's database security setup. It includes a gap analysis of current state vs. industry-specific best practices and compliance requirements, and tactical and strategic recommendations to achieve and sustain best practices.

MENTIS was founded in 2004 by experts in information security, IT audit, compliance and enterprise software development. For more information, please contact 1-212-861-2235 or visit www.mentissoftware.com.
